

## POWERLINK CONTROL BAR

**INNOVATION AND THOUGHTFUL DESIGN IS AT OUR HEART AND THE NEW POWERLINK CONTROL BAR IS ANOTHER EXAMPLE.**

During the testing of the A-Wing, Armie decided he wanted to try something different to improve the ride and feel even further. Linking the middle handles allows for easy hand transfers, enhanced wing control during transitions and on waves. It increases light wind power, with both hands on the bar as it sets the wing higher and further from body turbulence, which improves low-end grunt. It also adds to upper end wind range by allowing your rear hand to move forward for optimal control positions in powered conditions. Although we recommend this for the A-Wing, it can also be fitted to many other brands wings too!
